HUMAN ORGAN HEALTH CARE

LUNG

Lung disease is any problem in the **lungs** that prevents the **lungs** from working properly. There are three main types of **lung disease**: **Airway diseases** -
- These **diseases** affect the tubes (airways) that carry oxygen and other gases into and out of the **lungs**.

KIDNEY

Kidney failure is the last (most severe) stage of **chronickidney disease**. This is why **kidney failure** is also called **end-stage renal disease**, or ESRD for short. Diabetes is the most common cause of ESRD. High blood pressure is the second most common cause of ESRD.

PANCREAS

Problems with the **pancreas** can lead to many health problems. These include **Pancreatitis**, or **inflammation** of the **pancreas**: This happens when digestive enzymes start digesting the **pancreas** itself. **Pancreat ic cancer**.

LIVER

The **liver** is essential for digesting food and ridding your body of toxic substances. **Liver disease** can be inherited (genetic) or caused by a variety of factors that **damage** the **liver**, such as viruses and alcohol use.
